

Release Notes

ABBYY Vantage export for Microsoft SharePoint

Version: 1.0

Release date: 20 July 2022

Introduction

The ABBYY Vantage export for Microsoft SharePoint is a Custom Activity or Custom export capability for ABBYY Vantage. With this new export, it is possible to send the results directly to Microsoft SharePoint.

ABBYY Vantage is a cloud-based document processing solution that provides Optical Character Recognition, document classification, and data extraction functionality.

Features

The ABBYY Vantage export for Microsoft SharePoint has the following capabilities:

- Connect directly to the Microsoft SharePoint API
- Export the results files of an ABBYY Vantage processing skill to Microsoft SharePoint.
- Define a mapping between ABBYY Vantage fields and Microsoft SharePoint fields to store document metadata directly to a folder or a list.
- Configure document versioning and folder creation behavior for Microsoft SharePoint.

Please review the help documentation for a complete list of the activity's capabilities and a step-by-step configuration guide.

Known issues

Reference	Description
CONN-2490	Connector can't export nested field groups as JSON/CSV
CONN-2516	Export of the field type "Money", is not supported for Lists in Microsoft SharePoint
CONN-2519	The connector error messages can be unclear in rare scenarios

Limitations

- Microsoft SharePoint Client Secret and Client ID are stored in clear text within the ABBYY Vantage Custom/Export activity.
- The connector can't transfer files larger than 4MB (Microsoft SharePoint API limitation)
- The maximum number of items within a repeating group or line items that can be exported is limited to 50.000
